importance. If between the expanding is promptly ware of the (on the vas- ill, examine its anterior

enclose the venous sinus identify the superior sagittal sinus and the right and left transverse sin- uoses (Fig. 7, 13). With scissors cut these sinuses open. Examine closely the superior sagittal sinus and verify that:

- It increases in caliber as it passes posteriorly (indicat- ing direction of venous blood flow)
- It is triangular on transverse facies (Fig. 7, 14)
- It has lateral expansions, the lacunae (Fig. 7, 15)

In relation to the superior sagittal sinus and lacunae, observe the arachnoid granulations (Fig. 7, 16). The arachnoid granulations are located at the junction of the superior sagittal sinus and the lateral
